

Mercola: Global Vaccine Passport Will Be Required For Travel

This is a thorough analysis of future travel that requires you to secure and carry a “vaccine passport” proving that you are clear of virus particles. I suggest that you read every word, listen to each video and carefully consider what it means for you. □ TN Editor

Around the world, there’s considerable resistance against mandatory COVID-19 vaccination, but even if the vaccine ends up being “voluntary,” refusing to take it will have severe implications for people who enjoy their freedom.

For months, the writing has been on the wall: Forced vaccination is part and parcel of the plan to “reset” the global economic system, forever altering life as we know it along the way. Now, global vaccine passports are in fact being introduced, and it’s only a matter of time before vaccination status will be a prerequisite for travel.

Just how voluntary is it if you have to have the COVID-19 vaccine if you ever want to leave the country — or perhaps even state — in which you live, at any point during the rest of your life?

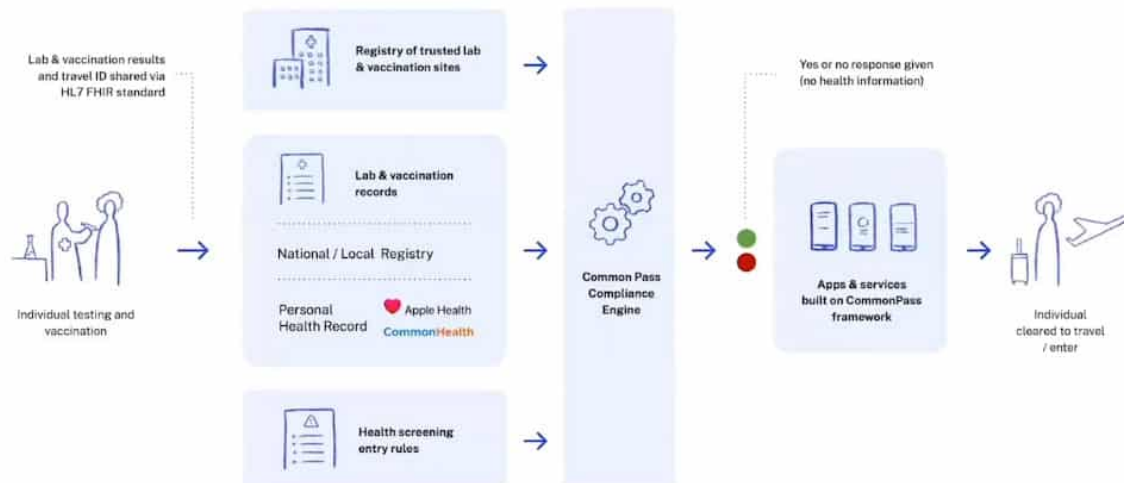

CommonPass

CommonPass¹ is a digital “health passport” framework initiated by The Commons Project, the World Economic Forum and The Rockefeller Foundation, which during the first week of July 2020 convened more than 350 leaders from the public and private sectors in 52 countries to design a common framework “for safe border reopening” around the world. The proposed framework involves the following:

1. Every nation must publish their health screening criteria for entry into the country using a standard format on a common framework
2. Each country must register trusted facilities that conduct COVID-19 lab testing for foreign travel and administer vaccines listed in the CommonPass registry
3. Each country will accept health screening status from foreign visitors through apps and services built on the CommonPass framework
4. Patient identification is to be collected at the time of sample collection and/or vaccination using an international standard
5. The CommonPass framework will be integrated into flight and hotel reservation and check-in processes

Eventually, the CommonPass framework will be integrated with already existing personal health apps such as Apple Health and CommonHealth. If you want to travel, your personal health record will be evaluated and compared to a country’s entry requirements, and if you don’t meet them, you’ll be directed to an approved testing and vaccination location.

A screen grab from the video illustrates the general idea of how this will all work. When you get your test result or vaccine, that data is uploaded to an app on your cellphone. The app generates a barcode that is then scanned at the airport, at hotel check-in and wherever else vaccine status verification is deemed necessary.

That the Rockefeller Foundation is one of the three founders of CommonPass should surprise no one, considering they basically laid the groundwork for it in their April 21, 2020, white paper² “National COVID-19 Testing Action Plan — Strategic Steps to Reopen Our Workplaces and Our Communities.”

That white paper laid out a strategic framework that is clearly intended to become part of a permanent surveillance and social control structure that severely limits personal liberty and freedom of choice.

It also warns that elimination of privacy will be required, stating that “Some privacy concerns must be set aside for an infectious agent as virulent as COVID-19 ...” The tracking system proposed by The Rockefeller Foundation also demands access to other medical data, which tells us the system will have any number of other uses besides tracking COVID-19 cases.

Worldwide Tracking Begins

This digital clearance system is currently being tested by United Airlines³ on flights between London and Newark, and Cathay Pacific on flights between Hong Kong and Singapore.⁴ As reported by Tott News, November 15, 2020:⁵

“Volunteer travelers landing at Newark Liberty International Airport on United Airlines Flight 15 from London Heathrow used the CommonPass health pass on their mobile phone to document their COVID-19 status and share it with airline staff upon disembarking.

Officials from U.S. Customs and Border Protection and the Centers for Disease Control and Prevention (CDC) observed the CommonPass demonstration in Newark ... The transatlantic trial followed a successful trial of CommonPass on a Cathay Pacific flight from Hong Kong to Singapore on October 6.

Paul Meyer, CEO of The Commons Project, says it is anticipated that following initial trials, CommonPass will be rolled out on other routes, including international travel to and from Australia ...

We are now seeing the beginning phases of a worldwide tracking system that will be linked to the health status of each and every individual ... This has always been the agenda. Track and trace; identify the undesirables through deception.”

CommonPass Is a Cog in The Great Reset Wheel

As explained in “What You Need to Know About ‘the Great Reset’,” the current pandemic is being used as a justification for why we need to reset the global economy and shift away from capitalism and free enterprise into a new system of technocracy.

The word “technocracy” is never used by actual technocrats, mind you. Instead, they talk about the Great Reset and the fourth industrial revolution, the nuts and bolts of which boil down to transhumanism. In years past, this plan was referred to as a “new world order” or “one world order.” All of these terms, however, refer to an agenda that has the same ultimate goal.

It’s a plan that is decades in the making. Ultimately, the goal is to monitor and control the world through technological surveillance. It’s a

world government run by self-appointed elitists; hence, it calls for the total dismantling of the political system, which includes the U.S. Constitution. National borders are also destined to be erased.

Sustainable Digital Finance

Technocracy is a resource-based economic system, which is why the World Economic Forum talks about the creation of “sustainable digital finance,”⁶ a carbon-based economy and carbon credit trading.⁷ As explained on its website:⁸

“Digital finance refers to the integration of big data, artificial intelligence (AI), mobile platforms, blockchain and the Internet of things (IoT) in the provision of financial services. Sustainable finance refers to financial services integrating environmental, social and governance (ESG) criteria into the business or investment decisions.

When combined, sustainable digital finance can take advantage of emerging technologies to analyze data, power investment decisions and grow jobs in sectors supporting a transition to a low-carbon economy.”

These rather innocuous-sounding definitions hide a true intent that would shock people to their core, were they to see the complete picture. Professor Klaus Schwab, founder and executive chairman of the World Economic Forum, has stated that the fourth industrial revolution will “lead to a fusion of our physical, digital and biological identity,” complete with implantable microchips capable of reading your thoughts.⁹

This no longer sounds so far-fetched when you consider that technocracy requires social engineering to work. It requires total surveillance. It requires each person to be tied to the digital matrix — physically, mentally and financially — such that they cannot rebel.

To learn more about the history and intent behind technocracy, consider reading Patrick Wood’s books, “Technocracy Rising: The Trojan Horse of

Global Transformation”¹⁰ and “Technocracy: The Hard Road to World Order.”¹¹

The Plan to Dehumanize Humanity

When world leaders now talk about “building back better” and spin tales about a utopia in which humanity no longer has a negative impact on the environment, what they’re really talking about is the transition to a world in which mankind is no longer free to do any of the things we’ve previously engaged in and typically enjoyed.

CommonPass is a cog in this Great Reset plan. It’s the beginning stage of mass tracking and tracing, under the guise of keeping everyone safe from infectious disease. Rest assured, it will not be limited to COVID-19. The pandemic is just the justification for ushering in this radical new way of life.

The global lockdowns are part and parcel of this plan too. You may have seen articles musing about how waterways and air cleared up while everyone kept indoors for weeks on end. Who knows, in the future, we may well have rolling lockdowns to look forward to — periodic house arrests for the sake of the environment, if not to prevent the latest outbreak.

Meanwhile, social distancing and mask wearing separates us from our fellow man, demoralizes and dehumanizes us and makes us alone, fearful and anxious, which in turn prevents us from thinking logically and from coordinating resistance efforts with others. Add to that a grossly biased media and draconian censorship, where the Big Tech overlords decide what opinions and even facts are allowable and which are not.

When you multiply it all together, it starts looking like the biggest psyop in the history of mankind, which in turn begs the question: If the direction they want us to go will actually lead to utopia, would this kind of social engineering effort really be necessary?

Welcome to 2030

November 10, 2016, the World Economic Forum published an article¹² in Forbes titled, “Welcome to 2030: I Own Nothing, Have No Privacy and Life Has Never Been Better.” Let’s read beyond the creepy headline and see what this is all about, shall we?

“Welcome to the year 2030. Welcome to my city — or should I say, ‘our city.’ I don’t own anything. I don’t own a car. I don’t own a house. I don’t own any appliances or any clothes.

It might seem odd to you, but it makes perfect sense for us in this city. Everything you considered a product, has now become a service. We have access to transportation, accommodation, food and all the things we need in our daily lives. One by one all these things became free, so it ended up not making sense for us to own much ...

In our city we don’t pay any rent, because someone else is using our free space whenever we do not need it. My living room is used for business meetings when I am not there. Once in a while, I will choose to cook for myself. It is easy — the necessary kitchen equipment is delivered at my door within minutes ...

Shopping? I can’t really remember what that is. For most of us, it has been turned into choosing things to use. Sometimes I find this fun, and sometimes I just want the algorithm to do it for me. It knows my taste better than I do by now.

When AI and robots took over so much of our work, we suddenly had time to eat well, sleep well and spend time with other people ... The work that we do can be done at any time. I don’t really know if I would call it work anymore. It is more like thinking-time, creation-time and development-time ...

Once in a while I get annoyed about the fact that I have no real privacy. Nowhere I can go and not be registered. I know that, somewhere, everything I do, think and dream of is recorded. I just

hope that nobody will use it against me. All in all, it is a good life."

Techno-Tyranny Steps Into Broad Daylight

As noted in The Last American Vagabond's article¹³ "Techno-Tyranny: How the U.S. National Security State Is Using Coronavirus to Fulfill an Orwellian Vision," the U.S. is rapidly adopting an artificial intelligence-driven mass surveillance system rivaling that of China, and legal and structural obstacles are being swept away "under the guise of combating the coronavirus crisis."

Again, technocracy requires social engineering to work, the effectiveness of which in turn requires mass surveillance and automation. In the first half of the 20th century, George Orwell wrote a dystopian novel, "Nineteen Eighty-Four," in which the government controlled every aspect of a person's life, including their very thoughts.

Today, scientists seem intent on turning Orwell's nightmarish vision into reality, using the COVID-19 pandemic, national security and public health as their justification for doing so. Don't expect them to admit this, however. Instead, be prepared for variations of the Forbes article above. It's basically a world in which everyone has been stripped of purpose.

Artificial intelligence algorithms make decisions for you, and if you disobey or start thinking fancy thoughts all on your own, you can expect to be financially and socially disenfranchised. Effectively eliminating an individual from society will be as easy as pressing a button and putting a freeze on your digital wallet and identification.

Already, many truth-tellers that were purged from YouTube and other social media platforms simultaneously lost their PayPal and other digital payment accounts. No advance warning, and no justification given. Imagine if all your finances were tied together in a digital finance system and everything was shut down all at once. That, I'm sure, would discourage most everyone from expressing any contradictory views.

If you think this kind of technology is still in its cradle, check out Spiro Skouras video below, in which he discusses the rollout of the United

Nations' biometric digital wallet. This, undoubtedly, brings the UN one step closer to becoming the world's de facto leadership hub.

Artificial Intelligence Is Further Along Than Most Can Imagine

Indeed, artificial intelligence is a key component of effective surveillance and social engineering. Data is useless unless you can interpret it and make decisions based on it. As noted by The Last American Vagabond:¹⁴

"[In 2019], a U.S. government body dedicated to examining how artificial intelligence can 'address the national security and defense needs of the United States' discussed in detail the 'structural' changes that the American economy and society must undergo in order to ensure a technological advantage over China, according to a recent document¹⁵ acquired through a FOIA request.

This document suggests that the U.S. follow China's lead and even surpass them in many aspects related to AI-driven technologies, particularly their use of mass surveillance.

This perspective clearly clashes with the public rhetoric of prominent U.S. government officials and politicians on China, who have labeled the Chinese government's technology investments and export of its surveillance systems and other technologies as a major 'threat' to Americans' 'way of life.'¹⁶"

The document¹⁷ the article refers to was produced by the National Security Commission on Artificial Intelligence (NSCAI), a government organization created by the National Defense Authorization Act (NDAA) of 2018.

Its purpose is "to consider the methods and means necessary to advance the development of artificial intelligence, machine learning and associated technologies to comprehensively address the national

security and defense needs of the United States,” and ensure the U.S. maintains a technological advantage.

To that end, the NSCAI is pushing for an overhaul of the American way of life and economy in order to usher in a more comprehensive AI-driven surveillance apparatus. In other words, a Great Reset.

How to Resist the Great Reset

Ironically, while the real plan is to usher in a tech-driven globalist-run dystopia free of democratic controls, technocrats speak of this plan as a way to bring us back into harmony with Nature.

As I discuss in “The Global Takeover Is Underway,” the medical tyranny and censorship of anti-groupthink that has emerged during this pandemic are an unavoidable element of the Great Reset, and if you think it’s bad now, just wait until the whole system is brought fully online.

The mere idea of dissent will become a thought of the past, because your life — your health, educational and work opportunities, your finances and your very identity — will be so meshed with the automated technological infrastructure that any attempt to break free will result in you being locked out or erased from the system, leaving you with no ability to learn, work, travel or purchase anything.

It sounds far-fetched, I know, but when you follow the technocratic plan to its inevitable end, that’s basically what you end up with. The warning signs are all around us, if we’re willing to see them for what they actually are. The only question now is whether enough people are willing to resist it to make a difference.

Along those lines, let us carefully reflect on one of the United States’ founding fathers, Benjamin Franklin, in his warning and caution with respect to losing our liberty. I frequently reflect on them when I consider potential options in this new contrived crisis challenges we are confronted with:

Those who would give up essential Liberty, to purchase a little

temporary Safety, deserve neither Liberty nor Safety. ~ Benjamin Franklin
